Quiz on Python Variables

1. What is a variable in Python?

- A. A data type
- B. A reserved keyword
- C. A storage location**
- D. An operator

✓ **Correct! Well done.**

Answer (C): A storage location

A variable in Python is a storage location that has a name and can hold a value.

2. Which of the following is the correct way to declare a variable in Python?

- A. `var x = 10`
- B. `x := 10`
- C. `x = 10`**
- D. `let x = 10`

✓ **Correct! Well done.**

Answer (C): `x = 10`

In Python, variables are declared using the assignment operator '=', for example, `x = 10`.

3. What will be the output of the following code: `x = 'Hello'; print(x)`?

A. Hello

B. hello

C. Error

D. None

✓ **Correct! Well done.**

Answer (A): Hello

The output will be 'Hello' as it prints the string stored in variable x.

4. Can variable names in Python start with a number?

A. Yes

B. No

C. Only if it's a float

D. Depends on the version

✓ **Correct! Well done.**

Answer (B): No

Variable names in Python cannot start with a number; they must start with a letter or an underscore.

5. Which of the following is a valid variable name in Python?

A. my-variable

B. my_variable

C. my variable

D. 1st_variable

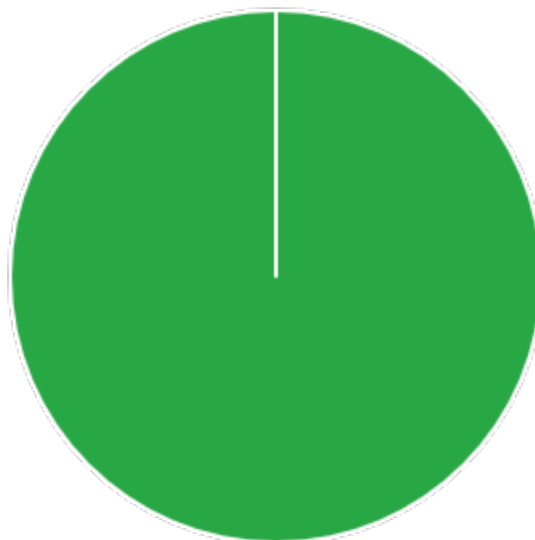

✓ **Correct! Well done.**

Answer (B): my_variable

Variable names can contain letters, numbers, and underscores, but cannot start with a number and cannot contain hyphens or spaces.

You scored 5 out of 5!
